

Ranjan Sharma

ranjan.sh@hcltech.com

Mob – 98101 29805

Experience Summary:

- Having vast experience in Data management, Data Engineering and Data warehousing on Azure and AWS cloud environments.
- Developed applications using **Python for Azure Databricks - Airflow Computation management**
- Develop data analytic pipelines serving various needs such as ETL scheduled job, Analytics, business machine learning models, etc.
- Worked on all repository style monolith, micro-service and monorepo
- Hand on experience in Developing the application using **SOLID Principles** and **Design Patterns**.
- Experience in developing & managing **batch and stream process** data analytics.
- Good exposure to **Cloud Infrastructure** for multiple vendors such as AWS/Azure also via **RedHat Openshift**
- Hands on experience on cloud deployment and creating image (**Ubuntu, Alma Linux OS**) using **Docker, Kubernetes** and **Services**

Software Proficiency

Application	: Data Engineering, Data warehouse, Real-time streaming data analytics, Pipelines Orchestration Azure Databricks / AWS Cloudformation, Airflow, Redhat Openshift - Multi Cloud Management,
Technology	: Development, Python - Pandas/PySpark/Numpy, Databases, Node
Frameworks	: Azure Databricks Airflow, Python, Pandas, Numpy, Pyspark, Node.js
Database	: OracleDb, PostgresDb, MongoDB, Redis, Dynamo DB, Cosmos Db
DevOps	: Docker, Kubernetes, Kafka, S3 bucket, Push Notification, Cloud Formation, Step Functions, Athena, Glue, Pub/Sub, YAML, Kinesis, Lambda, EMR, CloudWatch, Splunk, SonarQube, SNS, SQS, EKS, EBS, EFS,

Project Summary

Project : Vision Essential (Online E commerce Portal for Eye related products)
Technologies : Python Airflow pipeline data jobs via Azure Databricks, OracleDb and PostgresDB
Client : Kaiser Permanente

Responsibilities

- To develop and maintain data enrichment workflows via Airflow jobs which gets scheduled as cron for UI fetch and later analytics

- Involved in maintaining data flow through data injection using various data connectors for Postgres DB and Redis databases and passing enriched data for warehousing and ML model analytics

Achievements: Idea and implementation of two pro-active steps in period of 6 months:

- 24*7 circular development lifecycle between PST and IST timezone for development team
- Initiated closer sync up between QA and Dev team to reduce round about time during major releases such as Prod and UAT. This gives boost to completion time to higher priority bugs and reduce communication barriers among test and development teams

Project : EON Home

Technologies : Python AWS Elastic search based data analytics services and data sanitization for Gen AI client. AWS cloudformation and step functions orchestration of jobs

Client : EON

Responsibilities

- To sanitize data and store to Elastic DB realtime from document sources at confluence for GEN AI
- Involved in maintaining data flow through Oracle, MongoDB and Redis databases

Project : Telstra Client Engagement

Technologies : Python AWS based data analytics services and data sanitization for AI/ML processing

Client : Telstra

Responsibilities

- To sanitize data and store to Oracle for later analytics, interim db used Dynamo DB and Redis
- Involved in maintaining data flow through Oracle, MongoDB and Redis databases

Project : Engineering Workboard (Product scrubber and defect priority management)

Technologies : Python web services and batch analytic services, Oracle DB, MongoDB, Redis

Client : Cisco

Responsibilities

- To Design and develop the workflow services.
- Involved in development of REST Web Services on day to day activities.
- Involved in maintaining data flow through Oracle, MongoDB and Redis databases.

Achievements: Idea and implementation of two value creation ideas in period of 1 year:

- Docker deploiment image hardening to strengthen security
- Auto API failure detection and troubleshoot system

Project : Mitel Cloudlink-SDK (Cloud SDK backend for all type clients)

Technologies : YAML DOCKER and Kubernetes

Client : Mitel

Responsibilities

- To enhance the durability of API created in SDK
- To support the system team in deployment activities.

Achievements: Idea and implementation of two value creation ideas in period of 1 year:

- Parallel execution of application using multiple-threading CPU cores of machine

- Serial execution improvement for reducing initial time consumed to complete startup activities for micro-services

Project : PGI GlobalMeet SDK API (Cloud SDK backend for all clients)

Technologies : Python, React JS, yaml Kubernetes, Mongoddb, Oracle DB, HELM

Client : PGI GlobalMeet

Responsibilities

- To develop the system using AWS SAM serverless framework.
- To implement and enhance the security of the lambda

Project : Mitel NextGen (API, socket and server distribution for different platforms)

Technologies : Node.js, Express Framework, Sequelize Framework, PostgreSQL

Client : Mitel

Responsibilities

- Involved in improving quality for sdk by adding new features, enhancement. Testing functionality using Mocha.js, unit testing, etc.
- Involved in manual testing of developed features for quality assurance.

Achievements: Idea proposed, not implemented because of bad cloud translation API quality

- Global translation of chat messages among users from different region
- On need themes based on request from client also including dark theme

Project : Mitel AWW and MiShare hybrid platform client (Video/Audio sharing buffer protocol API)

Achievements: Idea and implementation of two value creation ideas in 9 months period:

- File management improvement for logs generated while session
- File size improvement for faster application distribution to clients
- Upgradation of node build library webpack for faster and more secure deliveries

Technologies:

- Node js and Angular framework full-stack
- Webpack, linting, code standards, agile workflow, git source control

Experience Details as per Technologies:

- Python: 5+years
- Databases Oracle/Mongo/Redis: 10+ years
- Node.js: 10+ years
- Frontend React JS/Angular: 10+years
- Hybrid Mobile Application for Android/iOS/Mac/Windows: 6+ years

Extra Qualification:

- **RDBMS** and IT Fundamentals from NIIT

- **MCSE and CCNA** certification training, Diploma in Hardware and Networking from ASET (New Delhi)

Professional Certifications and Training Completed:

- 2024 Assessment for: US Healthcare overview, Hipaa compliance, Electronic Medical Health records, Healthcare Interoperability, US Healthcare providers, Physician payments sunshine act overview 2024
- 2023 Assessments for: Business Aligned Framework (BAF) Overview 2023, Six Sigma and Lean 2023, LP Requirement Development 2023, LP Matrics 2023, LP_Risk & Opportunity Management 2023
- **Performance Management 2022**, Telecom Basics 2020, CMMI 2.0 2020, HIPPA Security 2020
- **Core PMI 2017, Agile Foundation 2017, ERS-EXA Lead and Technical Manager - PM Track – Pre-assessment 2017**
- **Delivery Management(DQI) and Metrics Portal training(PM/PMO) 2017**, Network Management Software Assessment 2017
- **Behavioral JBC Track 2016, Information Security 2016, Need a Systematic Approach 2016, Python Basic and Indeterminate 2016**

Academic Qualification

- | | |
|-----------------|--------------------------------|
| • BCA | From IGNOU, Rajghat, New Delhi |
| • MBA Marketing | From IGNOU, Rajghat, New Delhi |

I hereby declare that all the above details are true to the best of my knowledge and belief.

Place: New Delhi
